

IN THE CLAIMS:

Please cancel claims 3, 4, 9-14 and 19 without prejudice or disclaimer. Please amend claims 7 and 18 as follows. Please add new claims 21 as follows. A detailed listing of all claims is as follows.

Claim 1 (Original): A method of driving a liquid crystal display, comprising:
modulating source data using registered data previously provided and supplying the modulated data to a liquid crystal panel at an initial period of one frame period; and
applying data different from the modulated data to the liquid crystal panel at a later period of the one frame period.

Claim 2 (Original): The method according to claim 1, wherein the data applied to the liquid crystal panel at the later period is the source data.

Claims 3-4 (Canceled).

Claim 5 (Original): The method according to claim 1, wherein the later period begins at a half period of the one frame period.

Claim 6 (Original): The method according to claim 2, wherein the source data are not applied to the liquid crystal panel while the modulated data are applied thereto.

Claim 7 (Currently Amended): An apparatus for driving a liquid crystal display, comprising:

a modulator modulating source data using registered data previously provided therein;

and

a data provider alternatively applying the modulated data and data different from the modulated data to the liquid crystal panel within one frame period.

Claim 8 (Original): The apparatus according to claim 7, wherein the data different from the modulated data is the source data.

Claims 9-14 (Canceled).

Claim 15 (Original): The apparatus according to claim 7, wherein the data provider includes a delay circuit delaying the source data while the modulated data are applied to the liquid crystal panel.

Claim 16 (Original): The apparatus according to claim 7, further comprising:
a data driver applying the modulated data and the source data received alternatively from the switch to a plurality of data lines on the liquid crystal panel; and
a scanning driver applying a scanning pulse to a plurality of scanning lines on the liquid crystal panel.

Claim 17 (Original): The apparatus according to claim 16, wherein the scanning pulse has a frequency high enough to scan twice entire scanning lines on the liquid crystal panel within the one frame period.

Claim 18 (Currently Amended): A liquid crystal display comprising:
a liquid crystal display panel displaying images and having a plurality of data lines and a plurality of scanning lines thereon;
a modulator modulating source data based on registered data previously provided therein;
and
a data ~~provided~~ provider alternatively applying the modulated source data and the source data to the liquid crystal panel through the data lines within one frame period.

Claim 19 (Canceled).

Claim 20 (Original): The liquid crystal display panel according to claim 18, wherein the data provider applies the modulated source data to the liquid crystal display for a first half frame period and the source data to the liquid crystal display for a second half period.

Claim 21 (New): A method of driving a liquid crystal display, comprising:
applying a modulated data signal to a liquid crystal panel within one frame period; and
applying a data signal within the one frame period,
wherein the modulated data signal has a voltage level larger than that of the data signal.
